PRODUCT DESCRIPTION

The **eSCAPE Acoustical Products** line features these 12" cubicle panel extenders. Panel extenders are used to extend the height of existing cubicle partition walls to increase safety and enhance privacy. They are secured to the panel wall with adjustable top mounts (included). Each panel offers over a dozen colors. Our 12" cubicle panel extenders are available in widths of 23", 35", 47", 59", or 71".

PET (Polyethylene Terephthalate) is a lightweight, felt-like material which helps absorb the level of ambient noise within a work environment. The material itself is made from 100% recycled plastics, such as soda or water bottles. Because the PET material is soft and dense, it helps to reduce high-frequency noise that frequently distracts employees and staff while at work.

The 12" cubicle panel extenders we create with our **eSCAPE** PET material are just one of dozens of products and applications. Custom sizes are available (call for assistance).
