PRODUCT DESCRIPTION

Our office cubicle extender panels come in multiple sizes and heights. They fit nearly any existing cubicle partition wall. These extenders also add a pop of color to your current cubicle system. Not only do they reduce ambient noise, they enhance the privacy between coworkers.

What Is PET Made From?

PET (Polyethylene Terephthalate) is a lightweight, soft, felt-like material made with **100% recycled**

plastics such as soda or water bottles plastics. Instead of ending up in landfills or oceans, the plastics in these products are repurposed into multi-colored half-inch thick panels. Those panels are then cut into custom shapes and sizes to be used to reduce noise pollution and unwanted distractions in the workplace.

The sound absorbing material in our office cubicle extender panels are extremely effective in reducing ambient noise. It has a NRC (Noise Reduction Coefficient) rating of .75 or approximately 75% of high decibel noise.

Safety

PET material contains no harmful emissions, is odorless, nor is it flammable. In fact, the ASTM gives it a fireproof rating of E-84 CLASS A; the safest rating office cubicle extender panels can have. Not only are they durable, but easy to clean and disinfect as well.

How Do I Mount Them?

We provide powder coated, adjustable clamps for our office cubicle extender panels which are easy to attach! The clamps can securely attach to any cubicle divider panel between 2.5" - 3.5" thick.
