

# SAPPHIRE WALL SYSTEM

## Installation Guide

84"H-108"H

## Tools Needed for Installation

(Professional Assembly Recommended)

Drill Bits

1/4 Driver

Clamp

Mallet

Screw Gun

Allen Keys

Chop Saw

Level

Pry Bar

## Quick Tips

1. Unpack all product before assembly
2. Hang door last on install
3. 3 person installation
4. Make sure all panels are level
5. Frame entire office and lock to wall before hanging tiles.
6. Professional installation recommended.
7. \*\*If your floor plan does not fit exactly with our sizes we suggest the following: A contractor may be hired to build out wall to meet measurements. This is called a knee wall and very common in the industry when odd measurements are left. This will make a finished look.

## Identifying Parts

1/2" Hex Bolts- for connectors  
1" Hex Bolts- for panel to panel connectors  
3" Hex Bolts- for wall starter

2" Sheet Metal Screws  
for top beam.

Top Beam

Bottom Track

Spacer  
Spacer Threaded  
and not Threaded

Wall Starter

Stack up  
Connector

Connectors

End Trim

Full Slab  
Frame

Panel  
Frame

Panel Topper- 10"  
Panel Topper- 20"

### Tiles

Materials Vary

Sliding    Swinging    Open  
Door and Frame

Glass Door Topper- 10"  
Glass Door Topper- 20"  
\*1/2" Bigger Than regular Glass

Light Blockers  
Small/Large

## Example Images

### Example of bottom track option

#### With bottom track

#### Without bottom track

## Stacker Bracket Connectors

### Step 1: (for 95"H and 108"H only)

Attach glass topper to the wall system using the bracket shown (84"H wall system will not need a topper). **Please attach stacker brackets and stacker frame before putting panels together.**

Above door glass is  
1/2" larger

\*95"H wall system will have a 11"H topper

\*108"H wall system will have a 24"H topper

View Installation video here:

<https://youtu.be/ULeI-iZAwAk>

## Installing Wall Starter and 1st Panel

### Step 2:

**Locate** the starting point of the project and install your first wall starter sleeve. After that is installed attach the wall starter post for your first frame. **Use 3 in hex bolts.**

**No pre-drilled holes.**

Please use drill bolt and tap holes through frame. Then install sleeve on the wall

Fix the side groove into wall

### Step 3:

Slide frame into track

Connect Wall Starter To panel using 3" hex bolts

\*Wall starters can adjust up to 1"

\*If a connector needs to be attached to a wall, make pilot holes on the panel side and screw through the other side into the wall

\*Cut to fit wall starter over molding.

Insert the side pole to the side groove. Side pole is processed as photo and fixed with panel connectors.

View Installation video here:

<https://youtu.be/jMRLdvsThrQ>

## Installing Door Against A Wall Starter

\*Note: Whenever you are installing a door directly against a wall starter, be sure to remove the threaded washers and replace them with unthreaded washers to connect the door properly.

## Straight Connectors

\*Make sure everything  
is level

2. Connect the frames by M8\*30 bolt  
(1" Hex Bolts)

Unthreaded

Threaded

1. Adjust all frames into same level

Washers are threaded  
and unthreaded and  
can be interchanging.

View Installation video here:

<https://youtu.be/-KztYAftzi0>

## Bottom track assembly for frame

**\*Optional-** Not needed for structural support

**\*Cut to size**

**\*Install before tiles**

**\*Assemble bottom track before attaching tiles to frame**

**Step 1:**

Open bottom raceways

**Step 2:**

Slightly lift frame a half an inch  
Slide L-shaped part track underneath frame. When finished connect back of track to Bottom of L-shaped part of track

**Step 3:**

Close raceways

View Installation video here:

<https://youtu.be/NaZqDuL9unM>

## Attaching Connectors

**\*All connectors simply bolt into panels.**

4 ways connection

3 ways connection

Straight Connector

2 ways connection

120 degree  
2 ways connection

120 degree  
3 ways connection

**\*Use 1/2" Hex Bolt**

**\*Washers might need  
to be changed**

**1/2" Hex Bolts**

Top of the  
connector  
should be  
even with the  
top of the  
frame minus  
the top cap.

Adjust frame  
feet to correct  
height of  
conector

**\*Connect the partition and  
column by M8\*20mm bolt.**

**\*On smaller sapphire, top bolt might  
not line up. If this is the case, just use  
sheet metal screws.**

View Installation video here:

<https://youtu.be/hPV8lzmqWQ4>

## Attach End Trim to Wall system

### No pre-drilled holes.

Please use sheet metal  
screws (gold screws) and  
tap holes through frame.

**\*Do not overtighten**

**\*Use clamp to hold end  
trim tightly to frame**

**\*Use self tapping  
5\8 gold screws.**

View Installation video here:

<https://youtu.be/0hgIhQg3juU>

## Door Frame Assembly

1. Arrange door frame pieces on the floor in the correct positions that they will be put together.

Unscrew end screws from piece. Insert into frame so that holes match up. Attach hinge and secure with screws

Adjust the door with these screws

Insert connector into top and side of frame and secure with screws

If installing on a connector, do not use gold clips, use sheet metal screws to be able to attach to panels

### Parts

### Assembled Frame

**\*When installing on connector please pre drill holes and use sheet metal screws**

View Installation video here:

<https://youtu.be/5iAHI74A6Uc>

## Installing Door Stabilizer

\*This must be done before installing the door frame on to the panels

Install a stabilizer on each panel that the door frame will be connecting to.

To install stabilizer on to panel:

**Step 1:** Remove screws from panel

**Step 2:** Attach stabilizer on to panel with screws

**Step 3:** Attach stabilizer to floor by drilling directly into the floor and secure with screws

## Installing Swing Door Frame

4. Make sure door frame is level

\*Door frame on sliding door needs to be installed using sheet metal screws.

5. While tiles are off on 1 side of the wall, screw in through the panel to the frame with 1" hex bolts. 7ft walls this is the final step for the door frame assembly. 8ft walls need to be screwed in from the top as well.

\*Install frame before installing top beam.

\*Only screw door frame in from top if setup is 8ft or higher.

<https://youtu.be/OaIAK7xqBpg>

## Install Door Latch

### Step 1:

### Step 2:

### Step 3:

## Installing slim rod to door stabilizer beam for sliding doors (84"H only)

### Step 1:

Insert slim rod into track of beam

### Step 2:

Secure with screws

Slim rod

Insert here

Slim rod

Secure with screws

## Sliding Door Assembly

1. Screw in sliding door track directly into panel. Door rail must be placed 83 3/4" from the ground measuring from the bottom of the rail to the ground

2. Place sliding door rail onto screwed in sliding door rail clips and screw in from below. Door rail must be placed 83 3/4" from the ground.

3. Place sliding door bottom track on floor using double sided tape, velcro, or glue; Lining it up with the door rail. Then proceed to place in sliding door.

4. After inserting the sliding door into the rail, secure stopper on the end

5. Place sliding door rail finish caps

### Sliding Door Lock

Locks are available on bottom only of sliding doors. **Spring lock**-a 1" deep hole must be drilled in floor to engage lock.

### Parts:

View Installation video here:

<https://www.youtube.com/watch?v=xhDhIL7eM0I>

## Installing Door Frame Against Connector

1. When installing a door frame against a connector:  
Remove the white clips from the connector.
2. Use pre-drilled holes and screws to install
3. Make sure its level
4. Install door after everything else is install

\*2" pan head screws  
into pre drilled holes.

\*Pre-drilled holes

\*Change new hinges

View Installation video here:

<https://youtu.be/76n4jfOB1OU>

## Installing the tile hook

\*Please use mallet to tap down tiles

\*Please use wood in between to keep tiles aligned

\*Do not hit tiles too hard

\* If top tile doesn't clip in you are off on the bottom.

**Fix the Tiles**

View Installation video here:

[https://youtu.be/\\_qhIGucsfY](https://youtu.be/_qhIGucsfY)

## Top Beam Panel Stabilizer

\*May need to be cut to size.

\*To be installed last

**\*MAKE SURE TOP BEAM  
GOES OVER WALL  
STARTER AND PANELS!**

\*Groove side down. Open side up

\*1 1/2" self tapping  
sheet metal screws

\*1 1/2" self tapping  
sheet metal screws

7" H Custom Panel

84 11/16"  
(with top cap)

83 3/8"

2 1/2"

## Top Beam Panel Stabilizer

\*May need to be cut to size.

**\*MAKE SURE TOP BEAM  
GOES OVER WALL  
STARTER AND PANELS!**

View Installation video here:

<https://youtu.be/zrFb1a7cj-4>

## Light Blockers

Single sided by any connector.

Double sided in between panels.

Light Blockers

\*If having trouble fitting between tiles start installing light blocker from the bottom to the top instead of top to bottom.

Light blocker inserted →

## ⚠ FINAL CONNECTION IS DONE BY A LICENSED ELECTRICIAN

**WARNING:** Risk of fire or electric shock. As with all non-directional systems, do not electrically connect panel to more than one supply source. Always determine that the panel is electrically connected to one and only one source of supply. Before using any equipment, check the entire system for polarity, continuity, and grounding integrity.

Click-Latch Device: When installing this system, ensure the connectors have securely clicked into position.

### Power Supply Connection

The Power System is an eight wire system consisting of four individual circuits rated at 20 amps/120 volts maximum. Circuit 1 (black), circuit 2 (red), and circuit 4 (pink), are served by a system neutral (white) and an equipment ground (green). Circuit 3 (blue) uses an isolated neutral (gray), and an isolated ground (green/yellow). The system may be supplied by a three phase power system with four individual circuits rated 20 amps/120 volts maximum, or as permitted by local code.

When connecting electric pass throughs to power moduls, please make sure **ARROW** is up

### Environmentally Sustainable

Our stone wool production process uses some of the most advanced technology available. The last decade has seen a new generation of ROXUL manufacturing advancements designed to lower our environmental footprint. These endeavors have included:

- the capture and recycling of rainwater;
- reduction in energy consumption;
- recycling of raw materials back into the production process;
- the use of natural lighting in our facilities; and
- repurposing water used during the manufacturing process.

### Moisture Resistance

ROCKBOARD® 40/60/80 ASTM C 1104	Moisture Sorption	<0.08%
------------------------------------	-------------------	--------

### Fungi Resistance

ROCKBOARD® 40/60/80 ASTM C 1338	Determination of Fungi Resistance	Passed
------------------------------------	--------------------------------------	--------

### Thermal Resistance

ROCKBOARD® 40/80 ASTM C 518 [C 177]	R-value/inch @ 75 °F RSI value/25.4 mm @ 24 °C	4.1 hr.ft².F/BTU 0.72 m²K/W
ROCKBOARD® 60 ASTM C 518 [C 177]	R-value/inch @ 75 °F RSI value/25.4 mm @ 24 °C	4.2 hr.ft².F/BTU 0.72 m²K/W

### Maximum Service Temperature

ROCKBOARD® 40/60/80	ASTM C 411	Hot Surface Performance In Compliance with ASTM C 612 @ 1200 °F [650 °C]
------------------------	------------	-----------------------------------------------------------------------------

### Fire Performance

ROCKBOARD® 40/60/80 ASTM E 84[UL 723]	Test for Non-Combustibility Characteristics	Non-Combustible Flame Spread = 0 Smoke Developed = 0
